Example short article

The Berlin plug-in developers u-he have released an update to their tape effects plugin SATIN, available for Mac OSX and Windows. Improvements and additions include AAX support for ProTools, adjustable azimuth, new analyzer features and faster loading time. The GUI can now be resized in 10% steps (a feature shared by some of the other u-he plugins).

Launched in 2013, Satin already offered a comprehensive simulation of classic tape machines, including NR encoding and decoding, continuous tape speed from less than 2 ips up to 30 ips, wow & flutter, 4-track tape delay and true tape flanging. With the inclusion of adjustable azimuth for the repro heads, u-he adds yet another dimension of sonic control to the mix.

New in 1.2:

- * azimuth control
- * AAX support for ProTools
- * value display also shows parameter units
- * much faster GUI loading time
- * GUI size from 70% to 200% in 10% steps
- * link option for "Circuit" and "Compander"
- * new analyzer options via right-click

Note for publishers

If your magazine features a cover CD/DVD, we would be happy if you included Satin in your "demos" section. Please use the zip files linked on the previous page.
